Background Information

Young Energy Europe is a project with the aim to enhance climate protection measures in companies. Young professionals from a wide range of sectors will be trained to become Energy Scouts allowing them to help monitor and reduce energy consumption in their companies.

Project

The training involves a general introduction on how energy consumption affects global climate and how its reduction can help companies and the environment. The Energy Scouts will learn to

- analyze energy consumption within their company
- use energy meters and interpret their data
- apply the newly acquired knowledge by implementing an energy efficiency project at their workplace

Young professionals and companies equally profit from the program: Companies can make use of the vocational know-how their employees receive, become more energy-efficient and save costs. The young professionals benefit both personally and professionally as they develop and introduce new ideas and solutions for their companies on the way to a low carbon economy.

Young Energy Europe started in Bulgaria, Greece, Hungary and the Czech Republic in November 2017. It will be organized by the local German Chambers of Commerce Abroad. The overall project management is provided by the DIHK Service GmbH in Berlin.

The European Climate Initiative (EUKI)
is a project financing instrument by the Federal Ministry for the Environment, Nature Conservation and Nuclear Safety (BMUB). Its implementation is supported by Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ). It is the overarching goal of the EUKI to foster climate cooperation within the European Union in order to mitigate greenhouse gas emissions.
